

## SAFETY BY DESIGN

### TO PROTECT VISITORS

EN 16005 is there to safeguard pedestrians from accidents caused by the design and installation of automatic door systems. Because power-operated doors are essentially machines with moving parts, the safety of users is a key consideration.

Prevent hazards such as trapping fingers or even crushing bodies to ensure the safety of all doors users by using Bauporte Doors UK Ltd for your [maintenance](#).

### TO PROTECT BUILDINGS

Protect your building in the best possible way against uninvited visitors; all Bauporte doors can be configured to meet the highest levels of security. Pas 24, EN 1627: 2011, RC2, 3 or 4 applies to our doors and defines the resistance classes, resistance time (the time period in which a product can resist a break-in). More about Bauporte's anti-theft protection [here](#).

CITY HALL EINDHOVEN

Royal Full Vision Revolving Door meets EN 1627:11, RC 3
